

Fixed Shield (Control Wall) Standard Installation Instructions

1. Determine Fixed Shield's position on wall and floor.
2. Secure the wall and floor mounting channels.
 - a. Butt floor mounting channel against wall mounting channel.
 - b. Floor mounting channels go between vertical wall and/or couplers.
 - c. Secure with appropriate screws (not provided).
 - d. Make sure all screw heads are flush
3. Place Fixed Shield in floor and wall mounting channels and vertical couples. Secure shield to floor and wall mounting channels with $\frac{3}{4}$ " screws (Screws provided).
4. Secure wall bracket (aluminum angle) to wall at proper height (84 $\frac{1}{4}$ ") using appropriate screws (not provided).
5. Secure connecting bar (aluminum angle) to top of fixed shield and to wall bracket (Screws provided).

Notes: $\frac{1}{4}$ " hole is not predrilled; connecting bar and wall bracket may require cutting to size.
6. Install glass pane(s) in frame opening(s).
 - a. Use provided glazing tape/blocks on all sides of glass. The glass should **NOT** rest directly on frame.
 - b. Install removable stops (screws provided)
 - c. Glass must be installed last after the connecting bar has been secured.
